## 1.3 Findings, Opinions and Conclusions

### 1.3.1 Recognized Environmental Conditions

Hillmann has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E1527-13 of the Property as described in Section 2 of this report. Any additions to, exceptions to, or deletions from this practice are also described in Section 2 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property, except for the following:

| RECOGNIZED ENVIRONMENTAL CONDITIONS | |
|---|---|
| | No RECs were identified. |
| **HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS** | |
| | No HRECs were identified. |
| **CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS** | |
| | No CRECs were identified |
| **SIGNIFICANT DATA GAPS** | |
| | No SDGs were identified. |

### 1.3.2 REC Response Action Recommendations

The following table presents recommended response actions to the identified RECs for further investigation and/or corrective action:

| REC RESPONSE ACTION SUMMARY TABLE | |
|---|---|
| **REC** | **Response Action** |
| | (No RECs were identified) |

### 1.3.3 Notable Environmental Conditions / De Minimis Conditions

The following environmental conditions were identified, but are not considered to be a REC in connection with the Property:

| NOTABLE ENVIRONMENTAL CONDITIONS / DE MINIMIS CONDITIONS | |
|---|---|
| 1. | The Property consisted of vacant land prior to the mid-1970s, with an artificial pond present between the 1940s and 1960s. The Property was acquired by the Oceanside Unified School District in 1971 and the Pacifica Elementary School was subsequently constructed on-site. In approximately 2004, the former school structure was demolished and the Property continued to be used by the district with modular structures until the mid-2010s. The Property has remained unoccupied since approximately 2016. |
| 2. | Hillmann observed two (2) utility owned pad-mounted transformers on the northwest corner of the Property. No staining and/or leakage was observed. |
| 3. | Pacifica Elementary School at 4991 Macario Street is listed on the ENVIROSTOR, SCH, CERS databases. The ENVIROTOR/SCH listing indicated that the Property was on a DTSC – School Investigation site type, with a No Further Action letter provided as of 11/05/2003, indicating no contaminants had been found. The CERS listing indicated the Property name, address, and a CERS ID of 37820031.<br><br>Hillmann reviewed available electronic documents posted on the Envirostor database, including a letter dated Nov 4, 2003 from the DTSC to the school district. The letter stated, in part:<br><br>"*The Department of Toxic Substances Control (DTSC) reviewed the Phase I Environmental Site Assessment Addendum (Addendum), titled 'Additional Environmental Background Data," dated October 7, 2003 and received October 14, 2003. DTSC has also reviewed additional correspondences, received on September 5, and October 31, 2003. All additional information was prepared by Construction, Testing, and Engineering, Incorporated (CTE). The Addendum and correspondences were forwarded in response to a previous determination that a Preliminary Environmental Assessment was required for the site… The additional aerial photographs and a site appraisal report in the Addendum confirm that the site was undeveloped and not used for agriculture prior to construction of the school. … Based on the information provided in the Addendum and a site visit conducted by DTSC on September 11, 2003, neither a release of hazardous material nor the presence of naturally occurring hazardous material, which would pose a threat to human health or the environment under unrestricted land use, was indicated at the site. Therefore, DTSC concurs with the conclusion of the Addendum that further environmental investigation of the site is not required and hereby approves the Addendum. As with any real property, if previously unidentified contamination is discovered at the site, additional assessment, investigation, and cleanup may be required."*<br><br>A separate DTSC letter to the district dated August 14, 2003 makes reference to additional information requested by DTSC and submitted by the district regarding on-site "import fill". Hillmann has requested copies of all environmental files for the former school investigation from both the school district and the DTSC.<br><br>The available information in the November 4, 2003 DTSC letter and the closed Envirostor case status does not suggest a REC in connection with the former school investigation. However, a request and review of all available environmental documents associated with the Envirostor case has not been conducted and remains pending. |

### 1.3.4 Environmental Professional Statement

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a *property* of the nature, history and setting of the subject *property*. # 2.0 INTRODUCTION

## 2.1 Purpose and Scope

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E1527-13. The ASTM describes these methodologies as representing good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35) (B). The primary goal of the processes established by ASTM E1527-13 is to identify *recognized environmental conditions* in connection with the Property.

The term *recognized environmental condition (REC)* is defined by the ASTM as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

The ASTM has also defined the terms *historical recognized environmental conditions* and *controlled recognized environmental conditions* as two additional types of RECs. The term *historical recognized environmental condition (HREC)* is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls or engineering controls).

The term *controlled recognized environmental condition (CREC)* is defined as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

Conditions determined to be *"de minimis conditions"* are not considered to be RECs, HRECs or CRECs. *De minimis condition* is defined by the ASTM, "…as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

The chief components of this assessment are generally described as follows:

- A non-invasive visual reconnaissance of the Property and adjoining properties in accordance with ASTM guidelines for evidence of RECs.

- Interviews of past and present owners and occupants and state and local government officials, seeking information related to the potential presence of RECs at the Property.

- A review of standard physical record sources for available topographic, geologic and groundwater data.

- A review of standard historic record sources, such as fire insurance maps, city directories, aerial photographs, prior reports and interviews, etc., to determine prior uses of the Property from the present, back to the Property's first developed use, or back to 1940, whichever is earlier.

- A review of standard environmental record sources including federal and state environmental databases, and additional environmental record sources, to identify potential regulatory concerns with the Property, adjoining properties and properties located within the surrounding area.

An evaluation of environmental or other regulatory compliance matters is excluded from the scope of this assessment.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

### 2.1.1 Business Environmental Risks/Non-ASTM Scope Considerations

In accordance with our contract agreement, Hillmann may have addressed the following potential environmental subject matters that are outside of the requirements of the ASTM E1527-13 standard:

Asbestos-Containing Materials (ACM): A cursory non-intrusive visual screening for the presence of suspect ACM within the accessed areas of buildings built prior to 1990 on the Property. It is emphasized that this cursory non-intrusive visual screening does not constitute an asbestos survey/inspection of the premises. An asbestos survey/inspection should be sought by the report User(s) if more certainty is desired regarding ACM and potential asbestos hazards at the Property. Furthermore, a review of regulatory compliance matters pertaining to asbestos is excluded from the scope of work.

Lead-Based Paint (LBP): A cursory non-intrusive visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980 on the Property. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for LBP or potential lead hazards. A comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding LBP at the Property. Furthermore, a review of regulatory compliance matters pertaining to lead-based paint is excluded from the scope of work.

USEPA Designated Radon Potential: Review of general non-site specific data published by the USEPA regarding the Radon Zone classification for the area of the Property.

Mold/Microbial Damage: A cursory non-intrusive visual screening within the accessed areas of buildings on the Property for evidence of systemic microbial problems, including visible mold

growth, water damaged building materials or musty odors. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for moisture/mold/microbial damage. A more comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding the potential for moisture/mold/microbial damages at the Property.

NWI Wetlands: Review of US Fish and Wildlife Service National Wetland Inventory digitized data of mapped wetlands as presented in the attached EDR Radius Map plus Geocheck Report.

It is emphasized that, regardless of the wetlands data obtained via the EDR Geocheck-Physical Setting Source Addendum, a delineation of regulated wetlands by a qualified professional would be warranted to determine the presence or absence of regulated wetlands at the Property.

Lead in Drinking Water: Review of the potential for elevated levels of lead in the drinking water by determining the source of the drinking water supply and a review of available testing or compliance data reports.

## 2.2 Property Location/Legal Description

Property location and legal description details are described as follows:

## 2.3 Data Gaps

A *data gap* is defined by the ASTM as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap and the ability to determine the presence or absence of recognized environmental conditions. The following table summarizes data gaps encountered during the assessment as well as a discussion of their significance.

| Data Gap: | Significant (Yes/No)? | Discussion |
|---|---|---|
| Historical records data failure | No | The date and/or type of the first developed use of the Property was not documented. |

| | | |
|---|---|---|
| | | Record gaps exceeding five years were encountered; however, no significant site use changes are suspected during these intervals. |
| Response to agency records requests not received as of date of report. | No | Any additional information indicative of a REC will be forwarded upon receipt. |

## 2.4 User Reliance

This report is for the exclusive use of the User(s) named on the front cover. No other party(ies) shall have any right to rely on the content of this report without first obtaining the consent of the original report User; and without obtaining written consent from Hillmann in the form of a letter of reliance or report recertification.

## 2.5 Significant Assumptions

The following significant assumptions are made:

- The site operations at the time of the site visit are assumed to reflect typical site conditions relative to potential environmental conditions and that no concealment of environmental conditions or releases by site owners or occupants has occurred. Likewise, it is assumed that no areas of the Property with potential environmental concerns or RECs were concealed or otherwise not reported, intentionally or unknowingly, by the Property owners/occupants and/or site escort at the time of the site visit.

- For the purpose of estimating the approximate direction of groundwater flow in the absence of site specific groundwater data, unless indicated otherwise, an assumption has been made that the gradient of groundwater flow follows the surface topography of the Property and immediate surrounding area.

## 2.6 General Limitations and Exceptions

### 2.6.1 Limitations

The report turnaround time specified by the contract agreement for this assessment may present a limitation to the availability of pertinent regulatory agency records. Such limitations, if encountered, are further specified in Section 4.4.

Significant limitations related to the condition or accessibility of the Property at the time of the site reconnaissance, if encountered, are reported in Section 5.1.

### 2.6.2 Other Exceptions or Deletions

No other exceptions or deletions from the ASTM Standard E1527-13 are reported.

### 2.6.3 Special Terms and Conditions

This Phase I Environmental Site Assessment has been prepared using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Property. Findings within this report are based on information collected from observations made on the day of the site reconnaissance and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, site development, redevelopment, or other construction purposes. No representation or warranty is made that the past or current operations at the Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on visual observations of the Property, interviews conducted, the records reviewed, information provided by the Client, and/or a review of readily available and supplied drawings and documents. Information obtained during the assessment, whether written, graphic or verbal, provided by the Property contact(s) or as shown on any documents reviewed or received from the Property contact, owner or agent, or government agency source; is assumed to be accurate except as specifically stated otherwise in this report. Independent verification of the accuracy or completeness of all information reviewed or received during the course of this assessment is not made and excluded from the scope of work for this assessment. No warranty or guarantee is made of the accuracy or completeness of information that was obtained from ostensibly knowledgeable individuals, regulatory agency representatives or other secondary sources.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The regulatory research is designed to meet the requirements of ASTM Standard E1527-13. Hillmann can neither warrant nor guarantee the accuracy or completeness of the information obtained from the regulatory database report provider during the course of this assessment.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. Reasonable efforts are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify

surficial and subsurface features that may have been hidden from view due to parked automobiles and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

No guarantee, explicit or implied, is made that the records pertaining to historical ownership or occupancy which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

The ASTM E1527-13 standard states that recommendations are not required to be included in a Phase I ESA report; however, further that recommendations are an additional service that may be useful in the User's analysis of landowner liability protections or business environmental risks; and that the User should consider whether recommendations for additional inquiries or other services are desired.

The recommended response actions to the identified RECs presented in Section 1.3, if any, are not intended to represent the only course(s) of action to take; nor does it imply any opinion as to the timing of the action. Furthermore, it is emphasized that additional response actions may become warranted depending on the outcome of the initial action(s) taken. Hillmann advises that consultation with legal counsel familiar with environmental and real estate law may be beneficial to the decision making process for the type and timing of a response action to identified RECs, if any.

Due to the limited nature of our review of potential Business Environmental Risks, the User of the report should consider whether to take additional action(s) to further define, properly manage and/or mitigate potential BERs.

In the event of any conflict between the terms and conditions of this report and the terms and conditions of the consulting services agreement for this project, the consulting services agreement shall control.

# 3.0 USER PROVIDED INFORMATION

The term "User" is defined by ASTM as the party seeking to use Practice E1527 to complete an environmental site assessment of the Property; specifically, the entities named on the front cover to which the report has been addressed.

## 3.1 Prior Environmental Reports/Documentation

No prior environmental reports/documentation were provided.

## 3.2 User Questionnaire

Section 6 of the ASTM E1527-13 standard describes certain tasks required to be performed by the report User in order to qualify for landowner liability protections to CERCLA liability. To assist the report User to meet these requirements, the ASTM E1527-13 standard recommends a questionnaire of inquiries (User Questionnaire) specified in 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31 be provided to the original report User. The following is a summary of the User's response:

# 4.0 RECORDS REVIEW

## 4.1 Physical Setting Sources

The following physical setting sources were reviewed:

| Source | Discussion |
|---|---|
| USGS 7.5 minute Topographic Map Data: (EDR Geocheck-Physical Setting Source Addendum) | The Property lies at an elevation of approximately 89 feet above mean sea level. An interpretation of topographic contour lines as well as a review of the EDR Geocheck-General Topographic Gradient suggested terrain sloping downward towards the east-southeast. The closest down gradient water body is Libby Lake, located approximately 0.22 miles to the southwest. |
| USDA SCS Soil Data: (EDR Geocheck-Physical Setting Source Addendum) | The soil type at the Property is classified as "Grangeville". This soil type is described as fine sandy loam with moderate infiltration rates. Additionally, the soil type "La Flores" was identified at the Property and is described as loamy fine sand with very slow infiltration rates. |
| Geologic Data: (EDR Geocheck-Physical Setting Source Addendum) | The geologic formation in the vicinity of the Property is described as a stratified sequence of the Mesozoic Era, Cretaceous System, and Cretaceous granitic rocks Series. |
| Prior Env. Reports: (Section 3.1) | No prior environmental reports were obtained. |
| Additional Sources/ Data: | No additional physical setting sources or data was obtained. |
| Groundwater Flow Discussion: | Based on a review of the above information as well as observation of the site, the direction of shallow groundwater flow at the site is inferred to be towards the east-southeast. |
| NWI Wetlands Data: (EDR Geocheck-Physical Setting Source Addendum) | No NWI mapped wetlands areas were depicted at the Property. |

## 4.2 Historical Use – Property and Adjoining Properties

No record of any historical petroleum/natural gas wells at or adjoining the Property was identified.

### 4.2.7 Additional Historical Data

Where applicable, the following additional pertinent historical data was obtained:

| | |

The listings indicated the Property was on the DTSC - School Investigation database, with a No Action required status as of 11/05/2003. A DTSC letter to the school district dated November 4, 2003 stated *"The additional aerial photographs and a site appraisal report in the Addendum confirm that the site was undeveloped and not used for agriculture prior to construction of the school."* |
| **Prior Env. Reports:** (Section 3.1) | Not applicable; no prior reports were provided. |
| **Site Observations:** | Indications of historic uses of the Property or adjoining properties were not observed during the site reconnaissance. |

### 4.2.8 Summary of Identified Historic Uses

The following table presents a summary of the types and approximate date ranges of identified prior uses of the Property:

| Property | |
|---|---|
| **Date Range** | **Use** |
| 1938 to early 1970s | Vacant lot with artificial pond from dammed stream channel 1940s to mid-1960s |

The following table presents a summary of the types of identified prior uses of the adjoining properties:

| Adjoining Properties | |
|---|---|
| **Date Range** | **Use** |
| 1938 to 1953 | Rural/agricultural land |
| 1964 to present | Residential |

### 4.2.9 Historical Records Data Failure

The ASTM E1527-13 standard defines data failure as a failure to achieve the ASTM specified historical research objectives after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. The objective is to identify all obvious uses of the property from the present, back to the property's first developed use, or back to 1940, whichever is earlier. Furthermore, records of historic use/conditions should be sought in intervals no less than approximately five years, unless the property conditions appear unchanged over a longer interval.

| Objective | Met? | Detail | Significant? |
|---|---|---|---|
| First developed use/date determined? | Yes | The first developed use of the Property was a public elementary school circa 1975. | NA |
| Record sources at 5-year intervals back to 1940 or first developed use? | No | Historical record gaps exceeding five years were encountered. However, significant site-use changes or undiscovered site uses appear unlikely to have occurred during the record gaps. | No |

| | | | |
|---|---|---|---|
| All obvious prior uses identified? | Yes | See Section 4.2.8. | NA |

Please refer to Section 2.3 for additional discussion of data gaps and their significance to the findings of the assessment.

### 4.2.10 Historic Uses REC Discussion

The Property consisted of vacant land prior to the mid-1970s, with an artificial pond present between the 1940s and 1960s. The Property was acquired by the Oceanside Unified School District in 1971 and the Pacifica Elementary School was subsequently constructed on-site. In approximately 2004, the former school structure was demolished and the Property continued to be used by the district with modular structures until the mid-2010s. The Property has remained unoccupied since approximately 2016.

The review of historical records did not indicate evidence of a REC in connection with the Property.

## 4.3 Standard Environmental Record Sources

A regulatory database report, titled EDR Radius Map™ Report, prepared by Environmental Data Resources of Shelton, CT was obtained and reviewed. The report provided a search of standard environmental record sources for listings of the Property, adjoining properties and sites within the surrounding area; and has been reviewed for the purpose of identifying listings suggesting a potential impact to the Property due to presence or migration of hazardous substances and/or petroleum products. Additional descriptions of the meaning and significance of the regulatory databases can be found in the regulatory database report in Appendix E. The EDR Radius Map™ Report provided a search of the following database categories in accordance with the requirements of the ASTM Standard E1527-13:

| Regulatory Database | Search Distance |
|---|---|
| Fed. National Priorities List (NPL/a.k.a. "Superfund" sites) & Proposed NPL | 1-mile |
| Fed. Delisted NPL | ½-mile |
| Fed. Superfund Enterprise Management System (SEMS; formerly CERCLIS) | ½-mile |
| Fed. SEMS-ARCHIVE (formerly known as CERCLIS NFRAP) | ½-mile |
| Fed. RCRA Corrective Action Sites (CORRACTS) | 1-mile |
| Fed. RCRA Transport/Storage/Disposal (TSD) sites | ½-mile |
| Fed. RCRA Generators (LQG, SGQ & CESQG) | Site & Adjoining |
| Fed. Institutional Control/Engineering Control (IC/EC) Registries | Site only |

| State/Tribal IC/EC Registries | Site |
| State/Tribal Voluntary Cleanup Sites | ½-mile |
| State/Tribal Brownfields | ½-mile |
| Additional Federal, State, Tribal and Local Environmental Databases | Variable |

Reported distances for adjoining listings discussed in Section 4.3.4, if applicable, are approximate and indicative of the presence of a public roadway or right-of-way between the adjoining site and Property.

The reported gradients indicated where applicable in Sections 4.3.4 and 4.3.5 have been estimated based on a number of factors including but not necessarily limited to field observation, review of topographic maps, database listing details and/or site specific geo-technical data.

### 4.3.1 Supplemental Database Listings

The regulatory database report was also reviewed for listings on supplemental databases, in addition to the Standard Environmental Record Sources. Any property or adjoining property listings on such databases of significant concern, if identified, is discussed in Sections 4.3.3 and 4.3.4. Otherwise, none of the other supplemental database listings identified by the regulatory database report are considered to be a REC in connection with the Property.

### 4.3.2 Limited Tier I Vapor Encroachment Screening

Limited analysis of the details of on-site, adjoining and vicinity database sites was conducted to identify potential sources of sub-surface vapor encroachment. This review was based on elements of the ASTM "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E 2600-15); and also on elements of "Methodology for Identifying the Area of Concern Around a Property Potentially Impacted by Vapor Migration from Nearby Contaminated Sources" (Buonicore, 2011-S-103-AWMA). Vicinity database sites pertaining to non-petroleum product releases within 1,760 feet of the Property in the up-gradient direction, 365 feet of the Property in the cross gradient direction and 100 feet of the Property in the down gradient direction; and vicinity database sites pertaining to petroleum product releases within 528 feet of the Property in the up-gradient direction, 165 feet of the Property in the cross gradient direction and 100 feet of the Property in the down gradient direction were reviewed to identify active contamination sites with the potential to affect subsurface vapor conditions at the subject property. The potential for vapor encroachment was considered in assessing whether or not a REC exists in connection with the Property when reviewing applicable sites within those distances.

Regulatory database sites with active petroleum or non-petroleum releases that are considered to constitute a vapor encroachment condition (VEC) to the Property, if any, are identified and discussed in Sections 4.3.3, 4.3.4 and 4.3.5.

### 4.3.3 Property Listings

The following listings of the Property were identified:

| | |
|---|---|
| **Name/Address:** | Pacifica Elementary School / 4991 Macario Street |
| **Database(s):** | ENVIROSTOR, SCH, CERS |
| **Data Discussion:** | The ENVIROTOR/SCH listing indicated that the Property was on a DTSC – School Investigation site type, with a No Further Action letter provided as of 11/05/2003, indicating no contaminants had been found. The CERS listing indicated the Property name, address, and a CERS ID of 37820031. Hillmann reviewed available electronic documents posted on the |

|---|---|
| | Envirostor database, including a letter dated November 4, 2003 from the DTSC to the school district. The letter stated:<br><br>"*The Department of Toxic Substances Control (DTSC) reviewed the Phase I Environmental Site Assessment Addendum (Addendum), titled 'Additional Environmental Background Data," dated October 7, 2003 and received October 14, 2003. DTSC has also reviewed additional correspondences, received on September 5, and October 31, 2003. All additional information was prepared by Construction, Testing, and Engineering, Incorporated (CTE). The Addendum and correspondences were forwarded in response to a previous determination that a Preliminary Environmental Assessment was required for the site. Based on review of the original Phase I Environmental Assessment, dated November 4, 2002, DTSC originally determined a PEA was required on August 14, 2003.*<br><br>*"The Site consists of approximately 10-acres, currently occupied by an elementary school. Based on the aerial photographs provided in the Phase I, dated November 14, 2002, the site appears to be located in an agricultural region during the years of 1950 through 1965. Since information was not provided to substantiate the site was not used for agriculture, DTSC had concerns that persistent agricultural chemicals from pesticides and fertilizers may have impacted the site. Also, additional information was required for the evaluation of lead-based paint.*<br><br>*"The additional aerial photographs and a site appraisal report in the Addendum confirm that the site was undeveloped and not used for agriculture prior to construction of the school. Additional information in the Addendum and correspondences demonstrated the lead-based paint evaluation was complete and adequately conducted.*<br><br>*"Based on the information provided in the Addendum and a site visit conducted by DTSC on September 11, 2003, neither a release of hazardous material nor the presence of naturally occurring hazardous material, which would pose a threat to human health or the environment under unrestricted land use, was indicated at the site. Therefore, DTSC concurs with the conclusion of the Addendum that further environmental investigation of the site is not required and hereby approves the Addendum. As with any real property, if previously unidentified contamination is discovered at the site, additional assessment, investigation, and cleanup may be required."*<br><br>A separate DTSC letter to the district dated August 14, 2003, makes reference to additional information requested by DTSC and submitted by the district regarding on-site "import fill".<br><br>Hillmann has requested copies of all environmental files for the former school investigation from both the school district and the DTSC.<br><br>The available information in the November 4, 2003 DTSC letter and the closed Envirostor case status does not suggest a REC in connection with the former school investigation. However, a review of all available environmental documents associated with the Envirostor case has not been conducted and remains pending. |
| **REC Discussion:** | Based on the details provided above, a REC is not suspected in connection with the Property. |
| **VEC Discussion:** | Based on the available data, a VEC is not suspected. |

### 4.3.4 Adjoining Property Listings

The following adjoining property listings were identified. Reported distances, where applicable, are approximate and indicative of the presence of a public roadway or right-of-way between the adjoining site and Property. The reported gradient has been estimated based on a number of factors including but not necessarily limited to field observation, review of topographic maps, database listing details and/or site specific geo-technical data.

### 4.3.5 ASTM Search Distance Findings

The following is a discussion of non-adjoining sites identified as located within the ASTM specified search distance surrounding the Property. In order to keep this discussion informative and concise, discussion(s) is/are provided of the listed site(s) for each database category that appears most likely to impact the Property based on distance, area topography and/or regulatory status. Listings of sites within the applicable search distances not specifically discussed below were reviewed and concluded not to be RECs in connection with the Property or VECs based on various factors including distance, area topography, known or inferred groundwater flow direction and/or regulatory status. Listings for the following databases, if identified, have been discussed above in Sections 4.3.3 and 4.3.4: Registered Storage Tanks, Federal RCRA Generators, Federal and State EC/IC, ERNS. A copy of the full regulatory database report, including available details of all listed sites, is included in Appendix E.

## 4.4 Additional Environmental Record Sources

Requests have been submitted to local, municipal and state agencies for pertinent records pertaining to the Property, particularly with regard to potential environmental concerns such as petroleum storage tanks, storage and usage of hazardous substances and petroleum products, and/or known or suspected environmental contamination. Where applicable, internet research of government environmental regulatory databases was also conducted, as well as a general cursory internet search of the Property address, for information indicative of a REC. The following table summarizes the findings of the research:

| Source | Type of Request | Outcome |

# 5.0 SITE RECONNAISSANCE

## 5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of the Property and improvements, adjoining properties as viewed from the Property boundaries and the surrounding area based on visual observations from adjoining public thoroughfares. Building exteriors were observed at ground level, unless otherwise indicated. Where applicable, representative areas of building interiors were accessed and observed to the extent they were made safely accessible with the cooperation of the site escort.

## 5.3 Interior & Exterior Observations

### 5.3.1 Storage/Usage of Hazardous Substances and Petroleum Products

The following hazardous substances and petroleum products were observed to be stored and used by property occupants:

| Occupant | Substance | Qty/Container Type | Storage Conditions |
|---|---|---|---|
| NA | No significant storage or use noted | | |

### 5.3.2 Drums

No hazardous substance or petroleum product drums were noted on the Property.

### 5.3.3 Unidentified Substance Containers

No unidentified substance containers suspected of containing hazardous substance or petroleum product were noted on the Property.

### 5.3.4 Other Hazardous Substances/Petroleum Products

No other containers of hazardous substances or petroleum products were noted on the Property.

### 5.3.5 Bulk Petroleum/Hazardous Material Storage Tanks

The following storage tanks for bulk petroleum or hazardous material storage were identified or reported to be present; or are suspected to be present based on visual observations:

| AST/ UST | Product | Capacity | Construction | Year Installed | Status | Location/Notes |
|---|---|---|---|---|---|---|
| (none) | | | | | | |

### 5.3.6 PCBs in Oil Filled Electrical/Hydraulic Equipment

The existing site improvements were established prior to the ban of PCBs in 1979. The following oil-filled electrical/hydraulic equipment was identified at the Property:

Hillmann observed two utility-owned (2) pad-mounted transformers located on the northwest corner of the Property. No signs of staining and/or leaking was observed.

### 5.3.7 Odors

No strong, pungent or noxious odors were noted at the Property.

### 5.3.8 Pools of Liquid

No standing water or pools of liquid likely to contain hazardous substances or petroleum products were noted at the Property.

### 5.3.9 Interior Stains or Corrosion

No interior areas were identified at the Property.

### 5.3.10 Interior Drains/Sumps

No interior areas were identified at the Property.

### 5.3.11 Exterior Pits/Ponds/Lagoons

The following exterior pits, ponds and/or lagoons were identified on the Property in connection with waste treatment or disposal.

A sewage lift station associated with the former school facility was observed at the Property. Considering it was used to handle sanitary sewage at a school, it is not considered to be a REC in connection with the Property.

### 5.3.12 Stained Soil, Pavement/Stressed Vegetation

No stained soil, pavement or stressed vegetation was observed at the Property.

### 5.3.13 On-Site Solid Waste Disposal/Fill Material

No evidence of any on-site solid waste dumping was noted at the Property. No evidence of recently deposited fill materials was observed at the Property.

The Property historically consisted of undeveloped land traversed by an intermittent steam channel. From the 1940s to the 1960s, the stream channel was dammed forming an artificial pond on portions of the Property. The pond and stream channel were drained and/or filled by the late 1960s, with the school structure developed in the early to mid-1970s. Given the former presence of a pond and stream channel, it is possible that imported undocumented fill materials were placed at the Property during this period.

### 5.3.14 Waste Water

No sanitary sewer discharges were identified at the Property.

Storm water runoff at the Property is discharged via a system of catch basins and on-site dry wells. No additional waste water discharges were identified at the Property.

### 5.3.15 Septic Systems

No septic systems were identified at the Property.

### 5.3.16 Wells

No potable, monitoring or other groundwater wells were identified at the Property.

### 5.3.17 Railroad Spurs

No railroad spurs were identified on the Property.

# 6.0 INTERVIEWS

## 6.1 Interviews with Past and Present Owners and Occupants

| Subject | Name/Affiliation | Summary |
|---|---|---|
| Property Owner / Representative | Andrea Norman / Associate Superintendent Business Service / Oceanside Unified School District | Ms. Norman completed an environmental questionnaire, which is included in Appendix C. Pertinent information from the questionnaire, where applicable, have been referenced in various sections of this report. |
| Property Occupants | Not applicable | Property was unoccupied. |
| Past Owners, Occupants, Operators | Not applicable | Past owners/occupants of the Property were not available for interview at the time of the assessment. |
| Owners/Occupants of Adjoining or Nearby Properties | Not applicable | The Property was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews with adjoining or nearby property owners or occupants were not conducted. |

## 6.2 Interviews with State and/or Local Government Officials

Written and on-line requests for environmental records of the Property from State and Local governmental agencies are detailed in Section 4.4.

# 7.0 BUSINESS ENVIRONMENTAL RISKS

In accordance with the contract agreement for this assessment, Hillmann has performed cursory reviews of several potential Business Environmental Risks (also known as "Non-Scope Considerations"). The ASTM E1527-13 standard defines the term business environmental risk (BER) as, *"a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."*

## 7.1 Asbestos-Containing Material (ACM)

The contracted scope of work included a cursory visual screening of the accessed portions of buildings at the Property built prior to 1990 for suspect asbestos containing materials (ACM). The information provided in this section, where applicable, is limited to identification of potential suspect materials in the readily accessible and observed areas of the building, and their general condition. This is not intended to be a comprehensive survey for the presence of ACM, and no testing has been conducted.

No buildings were present at the Property.

## 7.2 Lead-Based Paint

The contracted scope of work included a cursory visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980. This is not intended to constitute a comprehensive survey for LBP or potential lead hazards, and no testing has been conducted.

No residential buildings were present at the Property.

## 7.3 Radon

Data compiled by the USEPA, as summarized by the regulatory database report, indicated that the Property is located in an area classified as Zone 3 or 'low risk' area for radon. Radon testing was not included in the scope of this assessment.

## 7.4 Mold/Microbial Damage

As per the contracted scope of work, Hillmann conducted a cursory visual screening of the accessed areas of the building for evidence of significant damage to building materials and finishes as result of moisture intrusion and/or mold/microbial growth. Given the absence of building structures at the Property, mold/microbial growth is not considered to be a significant environmental concern.

## 7.5 NWI Mapped Wetlands

As indicated in the Physical Setting Source table of Section 4.1, no NWI mapped wetlands areas were depicted at the Property by the EDR Geocheck-Physical Setting Source Addendum (attached in Appendic E).

The scope of work for this assessment excludes a visual determination of regulated wetlands at the Property. It is emphasized that, regardless of the wetlands data obtained via the EDR Geocheck-Physical Setting Source Addendum, a delineation of regulated wetlands by a qualified professional would be warranted to determine the presence or absence of regulated wetlands at the Property.

## 7.6 Lead in Drinking Water

The scope of work for this assessment included a review of the potential for elevated levels of lead in drinking water by determining the source of the drinking water supply and a review of available compliance or testing data.

No potable water service was identified at the Property. It is noted that municipal water connection is available at the Property from the City of Oceanside. A recently published water quality report from the utility indicated compliance with USEPA water quality standards for lead in drinking water. A copy of the report has been attached in Appendix F.

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

## RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/29/2021 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

Summary Details:

Conditions at proposal July 14, 1989): The Camp Pendleton Marine Corps Base encompasses approximately 125,000 acres in San Diego County, California. The installation is bordered by the City of San Clemente to the north, the City of Oceanside to the south, and the City of Fallbrook to the east. The base has served as a training base since its establishment in 1941. Industrial and other support operations have generated ha ardous wastes, including waste oils, contaminated fuels and other petroleum products, cleaning solvents, and pesticide rinsate. Camp Pendleton is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part of IRP studies, the Navy identified a number of potentially contaminated areas, including eight areas where wastes containing DDT, heptachlor, 2,4-T, lindane, inc, lead,trichloroethylene, methyl ethyl ketone, ben ene, and xylene had been deposited. Ground water is shallow, averaging 7-14 feet deep, and soils are permeable, conditions that facilitate movement of contaminants into ground water. The 40,000people living and working on the base obtain drinking water from wells within 3 miles of ha ardous substances on the base. The nearest well is within 1,320 feet of one of the disposal areas. To date, no contaminants have been detected in the camp s water supply. San Margarita River, Las Flores Creek, and San Mateo Creek empty into coastal wetlands within 2 miles of Camp Pendleton. Surface waters within 3 miles downstream are used for recreational activities. Critical habitatsfor three birds designated as endangered by the U.S. Fish and Wildlife Service are within 1 mile of the camp. The Marine Corps has completed a site inspection and is about to start planning for a remedial investigation/feasibility studyRI/FS)to determine the type and extent of contamination at the base and identify alternatives for remedial action. Status November 21, 1989): The RI/FS is underway.

| Site History: | In August and September 1993, Kleinfelder, Inc. (Kleinfelder) observed the removal of dispenser islands and associated product piping at the site. A total of 42 soil samples (plus five duplicate samples) were collected beneath pipe connections, around filler and turbine ports, in areas of visible staining or with apparent odors, and from soil stockpiles. Total petroleum hydrocarbons as gasoline (TPHg) were detected in 36 of the 47 soil samples submitted for analysis at concentrations ranging from 10 milligrams per kilogram (mg/kg) to 10,347 mg/kg. Total petroleum hydrocarbons as diesel (TPHd) were detected in 11 of the 47 soil samples at concentrations ranging' from 17 mg/kg to 359 mg/kg. Approximately 200 tons of soil were transported for disposal. In December 1993, Kleinfelder supervised the drilling of four soil boreholes at the site. Three - boreholes were completed as vapor extraction wells (VW-1, VW-2, VW-3) |

, and one was completed as a groundwater monitoring well (MW-1). TPHg was detected in three of the eight soil samples collected at concentrations ranging from 4.6 mg/kg to 290 mg/kg. TPHd as detected in one soil sample at a concentration of 38 mg/kg. Benzene was analyzed in four of the eight soil samples collected, and detected in two soil samples at concentrations of 0.06 mg/kg and 1.8 mg/kg. TPHg and benzene were detected in a groundwater sample collected from MW-1 at concentrations of 180,000 micrograms per liter (lJg/L) and 33,300 IJg/L, respectively. In December 1994, Kleinfelder supervised the installation of groundwater monitoring wells MW-2, MW-3, and MW-4. TPHg was detected in two of the seven soil samples collected at concentrations of 43 mg/kg and 10.9 mg/kg. TPHd was not detected in any of the seven soil samples above a laboratory reporting limit of 10 mg/kg. Benzene was detected in four of the seven soil samples at concentrations ranging from 0.100 mg/kg to 0.594 mg/kg. Liquid phase hydrocarbons (LPH) were observed in wells MW-2 and MW-3. TPHg and benzene were detected in a groundwater sample collected from MW-4 at concentrations of 58,500 1l9/L and 8,120 1l9/L, respectively. It appears that no additional work was conducted at the site by Kleinfelder and the site was transferred to SECOR International Incorporated (SECOR). On February 16 and April 19, 1996, a SECOR technician gauged four groundwater monitoring wells (MW-1 through MW-4) and removed detected LPH in MW-2 and MW-3. A total of approximately 50 gallons of liquid waste was removed from the two wells. In June 1996, SECOR supervised the installation of groundwater monitoring wells MW-5 through MW-9. TPHg was detected in two of the 20 soil samples at concentrations of 3.1 mg/kg and 430 mg/kg. Benzene was detected in three of the 20 soil samples at concentrations ranging from 0.022 mg/kg to 6.6 mg/kg. Methyl-t-butyl ether (MTBE) was detected in one soil sample at aV% concentration of 230 mg/kg. LPH was observed in wells MW-2, MW-3, and MW-9. In December 1996, SECOR supervised the installation of groundwater monitoring wells MW-10, MW-11, and MW-12. TPHg was detected in two of the 28 soil samples at concentrations of 0.7 mg/kg and 0.9 mg/kg. Benzene was not detected in any of the 28 soil samples above a laboratory reporting limit of 0.005 mg/kg. In January 1997, SECOR submitted a Work Plan for Remedial Action Implementation. The work plan proposed the installation of seven air sparge (AS) wells, six combination air sparge/vapor extraction (ASNE) wells, two groundwater extraction (GWE) wells, and two additional groundwater monitoring wells. SECOR proposed the installation of an ASNE system and a GWE system to remediate hydrocarbon-impacted soil and groundwater beneath the site. The work plan was approved by the LWaD in a letter dated February 5, 1997. In February 1997, SECOR supervised the installation of combination wells ASNE-1 through ASNE-6, AS wells AS-7 through AS-13, and GWE wells EX-1 and EX-2. TPHg was detected in four of the 10 soil samples at concentrations ranging from 0.6 mg/kg to 970 mg/kg. Benzene was detected in two of the 10 soil samples at concentrations of 2.2 mg/kg and 0.3 mg/kg. MTBE was analyzed in four of the 10 soil samples collected, and detected in one soil sample at a concentration of 0.6 mg/kg. In March 1997, a combined AS, soil vapor extraction (SVE), and GWE remediation system was designed and installed at the site. At the time of installation, the SVE system consisted of a catalytic oxidizer unit (located immediately behind the existing 7-Eleven store) manifolded to nine vapor extraction wells (VW-1, VW-2, VW-3, and VE-1 through VE-6). The AS component of the system consisted of a 10 horsepower (hp), oil-less ompressor manifolded to

13 wells (AS-1 through AS-13). The groundwater extraction system consisted of pneumatic submersible pumps installed in two extraction wells (EX-1 and EX-2) and one groundwater well (MW-9). Extracted groundwater was treated by particle filters and two 200-pound granular activated carbon (GAC) cylinders before being discharged to the San Luis Rey River under National Pollutant Discharge Elimination System (NPDES) General Permit 96-041 and Waste Discharge Identification (WDID) number 9000000795. In April 1997, SECOR supervised the installation of groundwater monitoring wells MW-14 and MW-15. TPHg was not detected in the three soil samples collected above a laboratory reporting limit of 0.5 mg/kg. Benzene was not detected in the three soil samples collected above a laboratory reporting limit of 0.005 mg/kg. The GWE remediation system began operation on May 1, 1997. The SVE remediation system began operation on August 11, 1997. LPH was not detected on-site following the Fourth Quarter 1997 groundwater monitoring event. The AS remediation system began operation on March 11, 1998. In August 1998, MW-5 was manifolded to the SVE and GWE remediation systems. In July 2001, the groundwater extraction system was disconnected due to NPOES permit issues, and was not restarted because SECOR was unable to obtain a sewer discharge permit from the City of Oceanside. In March 2002, SECOR requested cancellation of the NPOES permit. In March and April 2002, SECOR supervised the installation of air sparge wells AS-14 through AS-21. TPHg was detected in two of the six soil samples collected at concentrations of 310 mg/kg and 1.6 mg/kg. Benzene was detected in one of the six soil samples collected at a concentration of 0.007 mg/kg. MTBE was detected in four of the six soil samples collected at concentrations ranging from 0.005 mg/kg to 0.064 mg/kg. In May 2002, AS-14 through AS-21 were manifolded to the existing air sparge system. In June 2003, SECOR observed dispenser island and product piping upgrade activities at the subject site. Two soil samples were collected beneath the former dispenser islands. TPHg was not detected in either soil sample above a laboratory reporting limit of 0.5 mg/kg. Benzene and MTBE were not detected in either soil sample above a laboratory reporting limit of 0.005 mg/kg. In September 2003, SECOR observed the removal of three 10,000-gallon underground storage tanks (USTs) at the site. Six soil samples were collected from approximately three feet below the bottoms of the USTs under the direction of an LWQO inspector. TPHg was not detected in any of the six soil samples above a laboratory reporting limit of 0.5 mg/kg. Benzene and MTBE were not detected in any of the six soil samples above a laboratory reporting limit of 0.005 mg/kg. Two new 10,000-galion double-walled fiberglass USTs were installed following sampling activities. Approximately 123 tons of soil were transported off-site for treatment and disposal. In November 2005, the SVE system was converted to direct ventilation mode. In March 2007, a timer was installed allowing the system to operate in pulse mode (6 hours on/6 hours off). In October 2007, the existing VE system was converted to catalytic mode, and wells MW-1 through MW-4 were connected to the system. The system was taken off pulse mode for continuous operation. In May 2008, the SVE system was converted back to direct ventilation mode. In May 2009, the AS/SVE system was shut down pending a meeting with the LWQO to discuss a path toward closure. The AS/SVE system has removed and treated approximately 33,791 pounds of hydrocarbons since system startup.

- Potential Media Affect: Aquifer used for drinking water supply, Soil
- Potential Contaminants of Concern: Gasoline
- Site History: A previously unknown 300-gallon UST was struck during development (gradig) of the site, resulting in a fuel release. Soil samples were collected during the tank removal (February 4, 2008) at a depth of 8 feet (at the bottom of the tank excavation). One sample contained 22,000 milligrams per kilogram (mg/kg) TPH- gasoline and 3,900 mg/kg TPH as diesel. In March 26, 2008, 8 GeoProbe borings and 2 hand-auger

borings were advanced to depths of 2-9 ft. and soil samples were collected/analyzed. On June 18, 2008, a total of 55 cubic yards of soil was removed from the tank area to a depth of 11 to 14 feet (until confirmation samples indicated no petroleum hydrocarbons). Soil was transported offsite for disposal at a licensed facility and was not reused. One groundwater monitoring well was installed on January 16, 2009. Two sampling events indicated no fuel or MTBE contamination. Please see the Environmental Data tab for additional site specific information.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

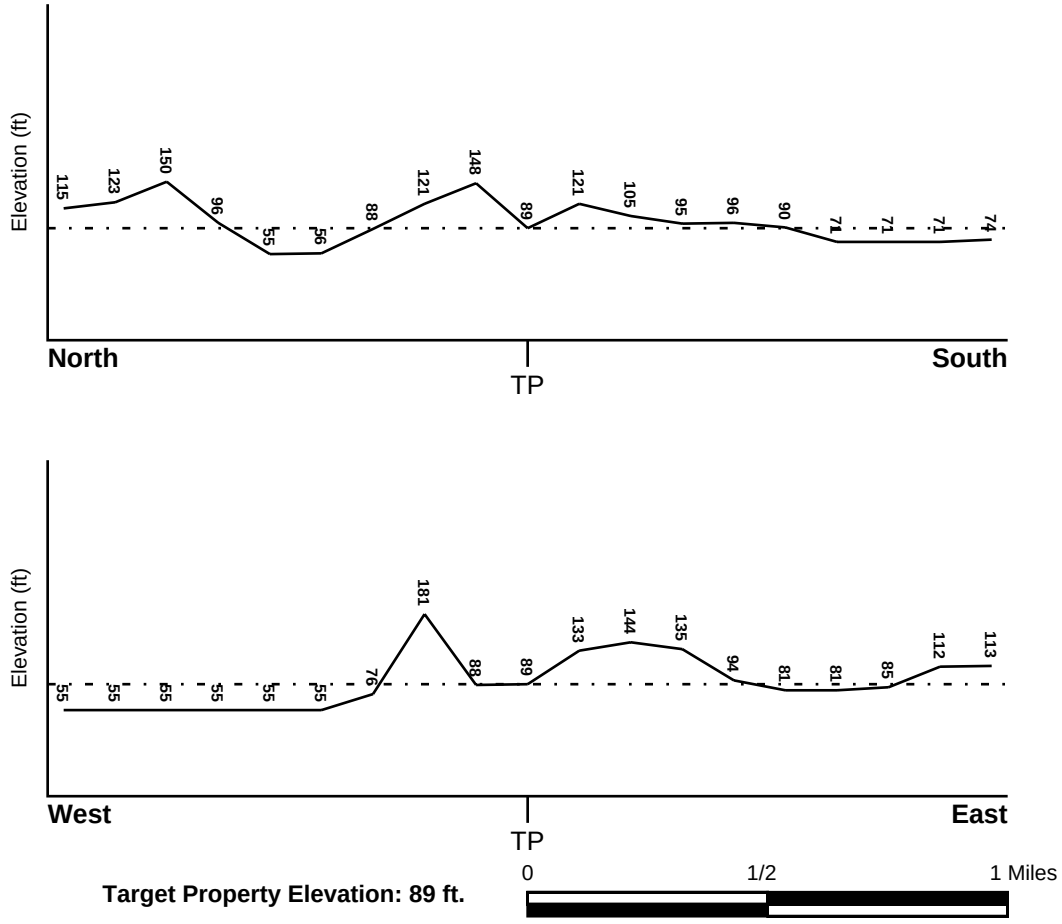
**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General ESE

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**AQUIFLOW®**

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

3. A search for facility records can only be conducted by one or all of the following:

    i. Facility Name, Address, or Identification Number;
    ii. Facility Application Number, or Permit to Operate Number; or
    iii. Facility Notice of Violation/Notice to Comply Number.

4. You will be notified in writing within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency.

4. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.

5. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's trade secret process.

# Water Quality Report 2020

## City of Oceanside's Tap Water Supply
## Met All State and Federal Health Standards in 2020

## The City of Oceanside is committed to providing you with safe and reliable drinking water

The Environmental Protection Agency (EPA) requires community water systems to deliver a Consumer Confidence Report, also known as an annual drinking water quality report, to their customers. These reports provide you information about your local drinking water quality. Your water is routinely tested for about 90 different substances to ensure that the water is of the highest quality. This report lists the substances that were detected during 2020 and includes details about where your water comes from. For more information about your water, contact Lori Rigby at (760) 435-5912.

**Este informe contiene información muy importante sobre su agua para beber. Favor de comunicarse a la ciudad de Oceanside a (760) 435-5912 para asistirlo en español.**

## Health Information

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA / Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at 1-(800)-426-4791.

## Water Sources

### The City of Oceanside has three sources of drinking water.

One source of water supply is **imported water** that is purchased untreated from the **San Diego County Water Authority (SDCWA)**. This raw water is then treated at Oceanside's Robert A. Weese (R.A. Weese) Water Treatment Plant. This facility filters and disinfects water from lakes and rivers, supplying about 82% of the drinking water used in Oceanside.

The second source is **treated drinking water** purchased directly from **SDCWA** which is blended with water from the **Carlsbad Desalination Plant**; this is about 8% of Oceanside's water supply.

The remaining 10% of the City's water supply comes from Oceanside's **Mission Basin Groundwater Purification Facility (MBGPF)**. This facility treats brackish groundwater from wells located in the San Luis Rey River Valley. The groundwater is purified by reverse osmosis and then disinfected.

The R.A. Weese Water Treatment Plant is maintained and operated by highly trained and certified individuals.

Imported water travels hundreds of miles away from the Colorado River and Northern California.

The Mission Basin Groundwater Purification Facility uses reverse osmosis to treat local brackish groundwater extracted from the Mission Basin Aquifer.

**Oceanside** delivers . . .

**20 MILLION**
**gallons per day**
**of clean drinking water to homes and businesses**

## Where Our Water Comes From

Approximately 90% of the water we use in Oceanside is imported from hundreds of miles away. This is "surface water" from lakes and rivers in Northern California and the Colorado River Basin. The Metropolitan Water District (MWD) imports this water to Southern California via a 242-mile-long aqueduct that carries Colorado River water from Lake Havasu and a 444-mile-long aqueduct bringing water from the Sacramento-San Joaquin Delta. Both aqueducts terminate in Lake Skinner in Riverside County where these waters are combined. The SDCWA purchases this imported water from MWD and distributes it to water agencies throughout San Diego County, including the City of Oceanside.

## Source Water Assessment

In December 2002, MWD completed its source water assessment of its Colorado River and State Water Project supplies. Colorado River supplies are considered to be most vulnerable to contamination from recreation, urban/storm water runoff, increasing urbanization in the watershed and wastewater. State Water Project supplies are considered to be most vulnerable to urban/storm water runoff, wildlife, agriculture, recreation and wastewater. A summary of the assessment can be obtained by contacting MWD at (213) 217-5696. The Carlsbad Desalination Plant (CDP) completed a source water assessment (Watershed Sanitary Survey) in August 2005. The survey was performed to investigate potential contaminant sources in the Pacific Ocean in the vicinity of the intake structure and in the watershed of the Agua Hedionda Lagoon. The potential contaminant sources evaluated in the Watershed Sanitary Survey are not likely to impact the water quality at the desalination plant. A summary of the assessment can be obtained by contacting CDP at (702) 606-8742.

## Ground Water Assessment

An assessment of the current groundwater sources for the City was completed in February 2002. The sources are considered most vulnerable to contamination from sewer collections and/or agricultural/ irrigation wells. A copy of the complete assessment is available at the City of Oceanside Water Utilities Department at 300 North Coast Highway in Oceanside. You may request a summary of the assessment by contacting (760) 435-5800.

## Contaminants in Source Water

The sources of drinking water (tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

## Utilities Commission Meetings

The Oceanside Utilities Commission meets bi-monthly in the City Council Chambers at 300 North Coast Highway. The public is welcome to participate in these meetings. For more information, please call (760) 435-5800.

### Contaminants that may be present in **source water** include:

**Microbial contaminants** such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

**Inorganic contaminants** such as salts and metals that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

**Pesticides and herbicides** that may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.

**Organic chemical contaminants** including synthetic and volatile organic chemicals that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application and septic systems.

**Radioactive contaminants** that can be naturally-occurring or be the result of oil and gas production and mining activities.

**The data tables above** and on the following page list all the substances that were detected in the drinking water during 2020 or the most recent sampling within the last five years. The presence of these substances does not necessarily constitute a health risk. The tables contain the name of each substance, the unit of measurement, the highest level allowed, the ideal goals, the detection level, the amount detected, and the usual source of the substance. Some substances are not tested each year because the concentrations do not vary significantly from year to year. For these substances, the tables include data from the most recent testing completed.

## You Can **Count on Oceanside** to . . .

**DELIVER**
clean, safe and reliable water every day

**SUPPLY**
affordable, cost effective and cost-competitive rates

**PROVIDE**
a reliable source of drinking water

**MAINTAIN**
water services to improve your quality of life, safeguard the economy and sustain the environment

## Fluoride

Oceanside has three sources of water: raw water that is treated at the R.A. Weese water treatment plant, groundwater that is treated at the MBGPF and treated water purchased from SDCWA. Oceanside does not add fluoride during treatment at R.A. Weese or the MBGPF. The fluoride found in these raw water sources is naturally occurring. The third source is imported treated water from SDCWA. Only the imported treated water has added fluoride. The area south of Oceanside Blvd. usually receives this fluoridated water with an average concentration of 0.7 ppm. The water delivered to all other areas in the City usually has an average fluoride level of 0.3 ppm. However, when the City's treatment plants are not operating at full capacity, some or all of the water supply for Oceanside can contain added fluoride up to 0.7 ppm.

## Lead

The drinking water is tested for lead every three years and was last tested in 2018. Samples were collected inside fifty-two private homes and at the entry points to the water distribution system. There was no lead detected in the water entering the distribution system, and no detections of lead collected in private homes. Thirty-four kindergarten through twelfth-grade schools requested lead sampling in 2018 and all locations were sampled by the City of Oceanside; one elementary school was sampled in 2019. Lead in drinking water is primarily from materials and components associated with private service lines and home plumbing. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Oceanside is responsible for providing high quality drinking water but cannot control the variety of materials used in home plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (1-800-426-4791) or at **www.epa.gov/safewater/lead**

## Contaminants in Drinking Water

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (USEPA) and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791) or at **www.epa.gov/safewater**

## Drinking Water Disinfection

It is important to disinfect drinking water in order to destroy pathogens that can make people sick. The disinfection must be present in the drinking water system all the way to each home, business and industry. In order to achieve this long-lasting residual, the City uses chloramines to disinfect the drinking water from each source. **Chloramines provide a stable residual throughout the distribution system delivering safe drinking water to each of our customers.**

## Terms and Abbreviations

**AL - Regulatory Action Level,** *the concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.*

**DLR - Detection Limit for purposes of Reporting,** *the lowest level that can be reliably detected and quantified.*

**Grains Per Gallon -** *is a unit of water hardness defined as 1 grain (64.8 milligrams) of calcium carbonate dissolved in 1 US gallon of water (3.785 liters). It translates to 17.1 parts per million.*

**HAA5 -** *Sum of Five Regulated Haloacetic Acids (HAAs), i.e., Monochloroacetic Acid, Monobromoacetic Acid, Dichloroacetic Acid, Dibromoacetic Acid, and Trichloroacetic Acid.*

**HAA9 -** *Sum of Bromochloroacetic Acid, Bromodichloroacetic Acid, Chlorodibromoacetic Acid, Dibromoacetic Acid, Dichloroacetic Acid, Monobromoacetic Acid, Monochloroacetic Acid, Tribromoacetic Acid, and Trichloroacetic Acid.*

**LRAA -** *Locational Running Annual Average*

**MCL - Maximum Contaminant Level,** *the highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.*

**MCLG - Maximum Contaminant Level Goal,** *the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency.*

**MRDL - Maximum Residual Disinfectant Level,** *the highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.*

**MRDLG - Maximum Residual Disinfectant Level Goal,** *The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.*

**NA - Not Applicable** *or not specified*

**ND - Not Detected**

**NTU - Nephelometric Turbidity Units,** *reflecting the lack of clarity in water.*

**pCi/L - Picocuries per liter,** *a measure of radiation.*

**PDWS - Primary Drinking Water Standard,** *MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.*

**PHG - Public Health Goal,** *the level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.*

**RAA - Running Annual Average,** *the monthly average of all samples computed each quarter and averaged for four consecutive quarters.*

**TT - Treatment Technique,** *a required process intended to reduce the level of a contaminant in drinking water.*

## Table Footnotes

**a)** *Turbidity is a measure of the cloudiness of the water. We monitor it because it indicates the effectiveness of our filtration system. Treatment plant effluent turbidity is recorded every 15 minutes. The turbidity of the filtered water shall be less than or equal to 0.3 NTU in 95% of the measurements taken each month. Turbidity for the Carlsbad Desalination Plant effluent is required to be less than or equal to 0.1 NTU in 95% of the measurements taken each month. Turbidity shall not exceed 1.0 NTU at any time.*

**b)** *Aluminum also has a secondary MCL of 2 mg/L.*

**c)** *MWD started fluoridation treatment in 2007. Some MWD water is used to supplement Oceanside's treated water. Oceanside does not currently fluoridate during treatment.*

**d)** *Lead and Copper are sampled every three years at consumer's taps and was last sampled in 2018. If the Action Level is exceeded in 10% of the samples (90th percentile) then the water supplier must modify the treatment process to prevent the leaching of these metals into the water from the plumbing. None of the samples exceeded the Action Levels.*

**e)** *No more than 5.0% of all monthly samples taken in the distribution system may be Total Coliform positive. In 2020, there were 1,613 samples taken throughout the City and one was positive (0%). All repeat samples were negative.*

**f)** *Sampling schedules can vary for radiological compounds, some locations are sampled up to every 9 years. Oceanside, SDCWA, and MWD all sampled for radiological constituents in 2020.*

**g)** *Compliance is based on a running annual average (RAA) of 30 distribution system samples taken each month. The City of Oceanside uses chloramines for disinfection.*

**h)** *Compliance is based on a locational running annual average (LRAA) of 8 distribution system sample locations taken every quarter.*

**i)** *Turbidity is also tested at 30 locations each month within the distribution system and reported under Secondary Standards.*

**j)** *UCMR4 = Unregulated Contaminants Monitoring Rule 4. The EPA requires monitoring in order to determine if there is a need to regulate these compounds. Testing for R.A. Weese and MBGPF was completed in 2018 and 2020. All 2020 samples were non-detect, and only 2018 values are reflected in the table.*

**k)** *Total Organic Carbon and Bromide results were collected from Weese source water.*

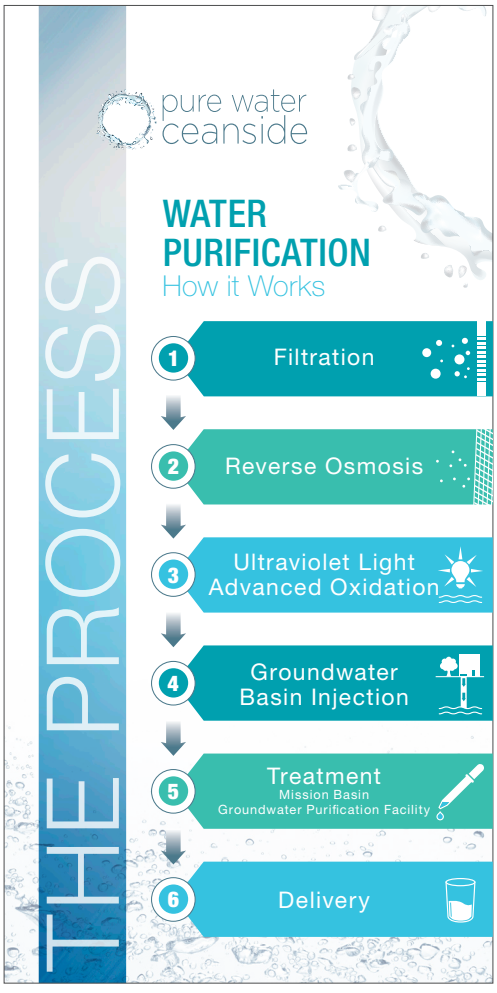
# Construction for
## Pure Water Oceanside is underway!

The project will be the first fully operational advanced water purification project in San Diego County and help diversity Oceanside's water supply and **REDUCE** reliance on imported water. Currently, the City of Oceanside imports almost 90% of our water supply. Pure Water Oceanside will **CREATE** 3 to 5 million gallons of drinking water each day -- enough to provide **32%** of the City of Oceanside's water supply!

This local and sustainable water source will create long lasting **BENEFITS** for the City and its water customers. Pure Water Oceanside requires half the amount of energy needed for transport imported water and reduces greenhouse gas emissions. Additionally, Pure Water Oceanside will **PROTECT** sensitive ecosystems by diverting water from being discharged into the ocean. Decreasing our reliance on imported water will also ensure the City is not as vulnerable to natural disasters such as drought which threaten imported water supplies.



Construction of the Pure Water Oceanside advanced water purification facility, pipeline and wells is on schedule with construction completion anticipated in 2022. **We want to thank the community for your patience during construction!** While the construction is temporary, the benefits of these updates will last for generations.

Pure Water Oceanside facility under construction in June 2021.
